

About us

LGC Standards is a division of LGC Group, the UK's designated National Measurement Institute for chemical and bioanalytical measurements. We are a leading global manufacturer and service provider of quality assurance and research tools, supporting your analytical needs in more than 170 countries worldwide. We use our expertise to produce to the highest standard, including ranges produced under ISO/IEC 17025 and accredited to ISO 17034. Our wide range of reference materials and proficiency testing schemes is complemented by our experience in outsourcing and customs, enabling us to adapt quickly to provide tailored solutions to meet your analytical needs.

Our history

Our origins can be traced back to 1842, when the Laboratory of the Board of Excise was founded to regulate tobacco adulteration. In 1875 the laboratory was appointed 'referee analyst', in landmark legislation specifically designed to protect the consumer. While we have significantly expanded our activities to support the wider analytical science community, to this day LGC hosts the unique function of the Government Chemist, providing expert opinion through independent chemical and bioanalytical measurement.

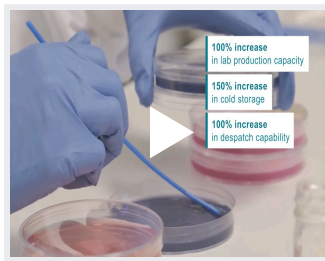

Our mission

We innovate and apply science in order to ensure the safety and integrity of products and services. Our vision: Science for a safer world. We are passionately committed to go beyond the call of duty through collaboration with our employees, our customers and our partners, with absolute quality. Our values of Passion, Integrity, Brilliance and Respect embody our commitment to using science to support our customers in making the world safer, and are deeply rooted in all our activities.

What we do

We offer a portfolio of 110,000+ reference materials and analytical standards, including ranges produced under ISO/IEC 17025 and accredited to ISO 17034. Our products are used to check the quality and metrological traceability of products, to validate analytical measurement methods, for research and development, and for the calibration of instruments. As the UK's designated institute for chemical and bio-measurement, we use the most advanced

analytical techniques to characterise our reference standards, so that you can rely on the scientific integrity of the data contained in your Certificate of Analysis. We also provide proficiency testing schemes accredited to ISO 17043 and used by more than 13,000

Real world applications

Neonicotinoid pesticides

How do you protect crops at the same time as protecting pollinators? Popular neonicotinoid pesticides, which make up 25% of the global agrochemical market, are a key cause of hive death. That's where we come in. Analytical laboratories need to test food, beverage and environmental samples for neonicotinoids, to meet changing regulatory requirements.

Food safety city

Xiamen, as one of the largest export hubs in the world, is a model 'food safety city', and we partner with the local government to keep it at the cutting edge and monitor quality and accuracy. This vital work helps safeguard food quality and protect consumers, both within China and in the rest of the world.
