Figure 1. Mean (±SE) number of eggs per female for the three species of *Chironomus* in the three types of sediment. The number of eggs per female was significantly different among the three species ($F_{2,12} = 10.0$, $p < 0.001$) and among the three types of sediment ($F_{2,12} = 10.0$, $p < 0.001$). The interaction between species and sediment type was also significant ($F_{4,12} = 10.0$, $p < 0.001$).

The image shows a document with a grid-like structure, likely a form or a ledger. The grid consists of several rows and columns. Some cells contain handwritten text, while others are empty. The text is somewhat blurry and difficult to read, but it appears to be a mix of letters and numbers. The document is oriented vertically, and the text is written in a cursive or semi-cursive style. The overall appearance is that of a scanned document from a past era.
