# MATRIZ DE RISCOS

Projeto Básico de Arquitetura e Engenharia para Contratação Semi-Integrada para Revitalização do Complexo da Polar no Município de Estrela/RS.

Estrela, 22 de julho de 2026

## 1. INTRODUÇÃO

No Projeto Básico para revitalização do complexo da polar, foi adotado o Regime de Contratação Semi-Integrada, no qual a empresa contratada assume a responsabilidade pela elaboração e desenvolvimento do projeto executivo, execução das obras e serviços de engenharia, fornecimento de bens ou prestação de serviços especializados, além da realização de montagem, testes, pré-operação e demais atividades essenciais para a entrega final do objeto.

De acordo com a Lei nº 14.133/2021, nesta modalidade de contratação não são permitidos aditivos (exceto nas condições legalmente previstas), circunstância que aliada à utilização de um Projeto Básico disponibilizado pela Administração, introduz um maior grau de incerteza em todo o processo, desde a contratação até a execução do empreendimento. Dessa forma, a Administração Pública transfere à Contratada parte dos riscos associados à execução do contrato.

Diante do exposto, será adotada a Matriz de Riscos, cláusula contratual que estabelece a distribuição de riscos e responsabilidades entre as partes, assegurando o equilíbrio econômico-financeiro inicial do contrato. Cada risco deve ser identificado, avaliado e classificado, permitindo uma gestão mais eficiente e a adoção de medidas para sua mitigação.

A elaboração da Matriz de Riscos teve como referência o estudo "**Alocação de Riscos em Contratos de Obras Públicas"**, desenvolvido e publicado pela Comissão de Infraestrutura (COINFRA) da Câmera Brasileira da Indústria da Construção (CBIC) em parceria com o especialista Fernando Vernalha. Foram identificados 45 (quarenta e cinco) eventos de risco para o projeto, os quais foram detalhados e descritos conforme seu risco, probabilidade, impacto, mitigação, risco residual e alocação de responsabilidade pelo risco. Desse total de eventos, detalhamos 14 (catorze) cuja materialização do risco está prevista a utilização da reserva de contingência.

É importante esclarecer que, quando se menciona a responsabilidade da Administração, entendesse como sendo o Município (na qualidade de Contratante), no entanto, nos eventos de responsabilidade da Administração, cuja materialização está associada à "reserva de contingência", entende-se que a Contratada possui as melhores condições para gerenciar ou mitigar esses riscos.

## 3. METODOLOGIA UTILIZADA

Com base em uma contratação Semi-Integrada realizada pelo município de Estrela e de uma contratação integrada pelo estado do Rio Grande do Sul para reforma da CELOG, foi elaborada Matriz de Riscos visando a inclusão de uma "taxa de risco" ou "reserva de contingência" no orçamento da obra, compatível com o objeto da licitação e com os riscos atribuídos ao contratado.

Cumpre destacar que a atribuição dos percentuais de probabilidade e de impacto dos eventos de risco foi conduzida por meio de uma análise qualitativa aprofundada, concretizada em reunião técnica. Embora não haja um repositório formalizado de dados históricos, a experiência acumulada desses profissionais, em contratações e execução de obras públicas anteriores, serviu como base empírica para dar suporte às estimativas.

Para a atribuição de valores, então, adotou-se um consenso técnico, no qual cada risco foi debatido até que se alcançasse uma estimativa convergente de probabilidade e impacto, tendo como critérios a complexidade do objeto, as condições típicas do local e a experiência em contratações análogas.

Feitas essas considerações, passaremos a detalhar abaixo os 14 eventos cuja materialização do risco está prevista a utilização da reserva de contingência. Esta matriz expressa as causas do risco, relacionadas à probabilidade de ocorrência, e seus efeitos, associados ao impacto.

| Item | Risco | Probabilidade (%) | Impacto (%) | Impacto – Pxl (%) |
|---|---|---|---|---|
| 1 | Vícios ou defeitos ocultos | 50,00% | 10,00% | 5,00% |
| 2 | Pandemias ou epidemias | 10,00% | 15,00% | 1,50% |
| 4 | Geopolítico | 15,00% | 25,00% | 3,75% |
| 5 | Climático | 50,00% | 5,00% | 2,50% |
| 10 | Atraso, desde a culpa não seja do contratado | 40,00% | 1,00% | 0,40% |
| 19 | Greve de servidores | 5,00% | 1,00% | 0,05% |
| 25 | Interferências subterrâneas | 70,00% | 1,50% | 1,05% |
| 26 | Alterações de legislação | 5,00% | 1,00% | 0,05% |
| 27 | Alterações tributárias | 5,00% | 0,50% | 0,03% |
| 28 | Alterações de custo acima do reajuste | 30,00% | 1,00% | 0,30% |
| 35 | Erros ou omissões na documentação técnica referencial | 20,00% | 10,00% | 2,00% |
| 39 | Ocupação irregular | 2,50% | 1,00% | 0,03% |
| 42 | Cambial | 50,00% | 0,50% | 0,25% |
| 43 | Geológico | 35,00% | 0,50% | 0,18% |

## 4. HISTOGRAMA

Com base nos dados das matrizes de risco, é realizada uma análise matemática utilizando o método de Monte Carlo. Esse método consiste em gerar aleatoriamente N amostras sucessivas de custo ou tempo (variáveis aleatórias), que são então testadas contra um modelo estatístico, representado por uma distribuição de probabilidade associada a um risco específico do projeto. Cada amostra corresponde a uma iteração do método. Assim, o método de Monte Carlo fornece uma estimativa do valor esperado de tempo ou custo, junto com um erro na estimativa, que é inversamente proporcional ao número de iterações; ou seja, quanto maior o número de iterações, menor o erro. No caso em questão, foram realizadas 9194 simulações com as variáveis dos 14 (catorze) riscos identificados. Dessa forma, são gerados diversos cenários possíveis de orçamento, permitindo aos gestores, com base na probabilidade, escolher aquele que melhor reflete a realidade do empreendimento. Com isso, torna-se possível apoiar a tomada de decisão e quantificar a reserva de contingência a ser alocada no orçamento referencial do projeto.

## 5. CONCLUSÃO

Com base na simulação de Monte Carlo, obteve-se uma taxa média de risco de +3,67% sobre o custo base conforme memória de cálculo anexa.
